

Project Design Phase
Proposed Solution Template

Date	28 June 2026
Team ID	
Project Name	Plugging into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	2 Marks

Proposed Solution Template:

S No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Analyse the impact of COVID-19 and lockdown on electricity consumption across Indian states, identify regional variations, and understand post-lockdown recovery patterns to support effective energy planning and decision-making.
2.	Idea / Solution description	Develop an interactive Tableau dashboard to analyse state-wise electricity consumption data (Jan 2019–Dec 2020). The dashboard provides trend analysis, regional comparisons, lockdown impact assessment, and recovery insights through interactive visualizations and reports.
3.	Novelty / Uniqueness	Integrates pre-COVID, lockdown, and post-lockdown electricity consumption data into a single platform, enabling comprehensive state-wise and region-wise comparative analysis and recovery tracking.
4.	Social Impact / Customer Satisfaction	Assists government agencies and energy planners in making data-driven decisions, optimizing resource allocation, and preparing for future disruptions in electricity demand while improving transparency in energy consumption patterns.
5.	Business Model (Revenue Model)	The solution can be provided to government departments, electricity boards, and research organizations through subscription-based dashboard access, consultancy services, and customized analytical reports.
6.	Scalability of the Solution	The platform can be enhanced by adding more years of data, integrating real-time electricity consumption data, and implementing predictive analytics and forecasting models for advanced energy planning.
